

Manipulation under Anesthesia (Knee)

Discharge Instructions

- Comfort
 - Discomfort increases 6-24h after surgery due to anesthetic/nerve block wearing off (if a nerve block was performed). This can be helped by oral pain medication. It is safe and normal.
 - Cold therapy – This will greatly reduce pain and will help with swelling for the first three days. You may use it 20 minutes on, 20 minutes off, as often as you wish. Always keep a cloth barrier, such as a towel, between the cold and your skin.

Medication

- For constipation – over the counter remedies such as Colace or Miralax as needed. Both the anesthesia and the pain medication can cause constipation.
- For pain – you can take weight-based ibuprofen (advil/motrin) and acetaminophen (Tylenol) for pain

Activity

- You will be discharged with a soft dressing over your knee. If you were previously in a brace prior to surgery, you will continue to use the brace after surgery.
- You should continue physical therapy (or begin within 1 week).\

Wound Care

- Keep the soft dressing on for 3-5 days after surgery. After 3-5 days, you can take off the soft dressing.
 - Do not get the leg wet until you take off the soft dressing. That means for 3-5 days, you should use a bag, hold the leg out, etc when showering.

Diet

- You may eat anything you like, but it's advisable to choose light, easily digestible foods and to drink plenty of water the day after surgery. Some people experience nausea as a temporary reaction to anesthesia.

Call your physician if:

- You develop a temperature over 100.3 degrees.
- You notice any drainage of the incisions 5 days or later after surgery.
- The arm becomes hot to the touch, red, intolerably painful, or swells suddenly. (Note some warmth, pain, and swelling are normal.)
- You have persistent pain and / or swelling in your calf.
- You have any questions or concerns. We are happy to talk to you at any time! If it is after hours, our answering service will page the PA on call and he or she will get in touch with you.
